M5: Activity 1 - Perform a String recognition using Selenium or similar technology

Vicente Javier Viera Guízar | A01639784
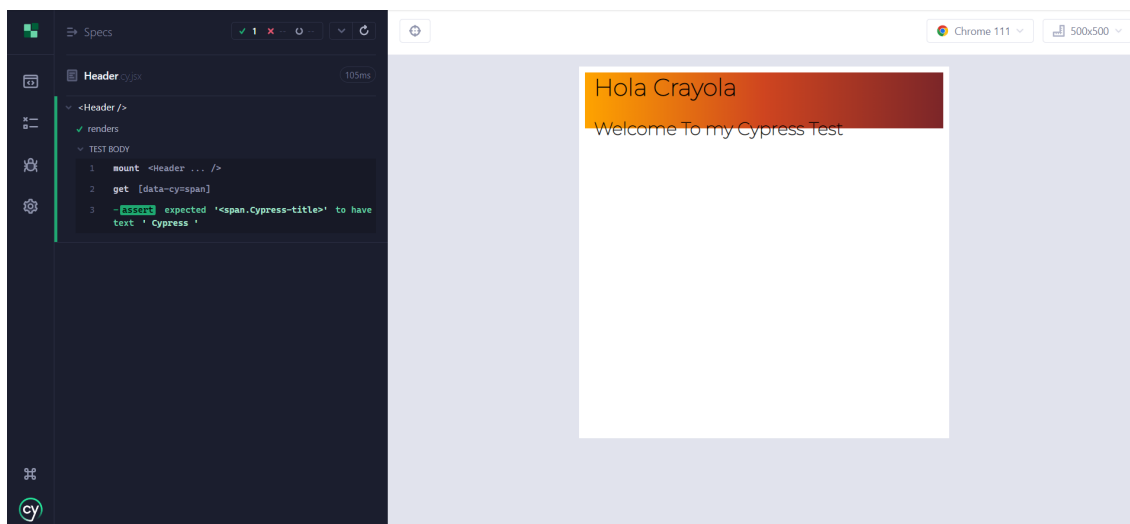

Code

```
1  import React from 'react'
2  import Header from './Header'
3
4  describe('<Header />', () => {
5      it('renders', () => {
6          cy.mount(<Header />);
7          cy.get("[data-cy=span]").should("have.text", " Cypress ");
8      });
9  });
```

Working Project

GitHub: https://github.com/VicenteVieraG/503_Homework/tree/main/cypress/cypressTest
Screen shots:

How it works?

In this test the component **Header** is being tested. First Cypress loads the component in it´s browser and then it finds within the component a tag with the **data-cy** prop being equal to "span". After this success it verifies if it contains the text " Cypress ". It can either assert or fail the test. In this case the test is asserted.
